

PRODUCT DATA SHEET

## **SELECTION & SPECIFICATION DATA**

Generic Type

Single package, water-based, flexible mastic fire protective coating for cables and cable trays.

## **Description**

A water based mastic that can be applied to electrical cables to retard fire propagation. Once applied, it meets code and insurance requirements for interior and exterior use. It provides a hard and flexible surface that will not dust, flake, or spall.

- Flexible
- · Hard, dust free surface
- · Allows easy replacement of cables
- · Water-based product, low odour

#### **Features**

- · Asbestos-Free complies with EPA and OSHA regulations
- · Factory Mutual tested and approved
- · Does not de-rate cables
- · Weathering approved for exterior use
- · Quality Manufactured under strict Carboline quality standards
- Provides protection at 1.6mm Dry Film Thickness

Colour | Grey

Textured

**Finish** 

Textured finish varies depending on the method of application.

**Primer** | Primer is not required.

Fireproofing Wet Film

Thickness

3mm

Fireproofing Dry Film

Thickness

1.6 mm

Solids Content | By Volume 53% +/- 2%

As Supplied: 29 g/l

**VOC Values** 

Calculated per EPA Method 24: 56 g/l

(Calculated minus water and exempt solvents)

Limitations

Not recommended for long-term surface temperatures over 91°C in continuous use, 104°C in non-continuous use.

**Topcoats** 

Topcoats are generally not required. In severely corrosive atmospheres, contact Carboline Technical Service for a topcoat reccomendation most suitable for the operating environment.

### SUBSTRATES & SURFACE PREPARATION

#### General

Before applying Thermo-Lag 270 to electrical cables, the cables must be dry and free of all oil, grease, condensation or any other contamination.

PRODUCT DATA SHEET

#### PERFORMANCE DATA

Test Method	Results
ASTM D2240 Hardness	Shore D - 30-40
ASTM E84 Surface Burning	Class A
DEFSTAN 02-711-2 Smoke Index	Class A
EPS 96202 Ampacity	No de-rating
IEC 60331-1 Circuit Integrity	50 minutes @ 1.6 mm
IEC 60331-11 Circuit Integrity	90 minutes @ 3 mm
IEC 60332-3-22 Flame Propagation	2 hours @ 1.6 mm
IEC 60754 Halogen Gas Content	Pass (<5.0 mg/g HCL)

<sup>\*</sup>All values derived under controlled laboratory conditions.

## TYPICAL CHEMICAL RESISTANCE

Exposure	Fumes	Splashes & Spills
Acids	Very Good	Fair
Alkalies	Very Good	Fair
Salt	Excellent	Very Good
Solvents	Good	Good

#### MIXING & THINNING

Mixer | Use 1/2" electric or air driven drill with a slotted paddle mixer (300 rpm under load).

Mixing

Thermo-Lag 270 must be mixed using a 1/2" electric or air driven drill with a slotted paddle or Jiffy mixer blade. Mix material for a minimum of 5 minutes to achieve the necessary texture required before spraying.

**Thinning** | Thermo-Lag 270 may be thinned with clean potable water up to 5% by volume.

## APPLICATION EQUIPMENT GUIDELINES

Listed below are general equipment guidelines for the application of this product. Job site conditions may require modifications to these guidelines to achieve the desired results.

Use 45:1 airless (minimum) with Dura Flow lower cylinder (3/4" outlet) / 3.3 gal. per minute to provide an operating pressure of 3,000psi (210 kg/cm<sup>2</sup>).

Airless Spray

\*Remove filters and surge tanks. Set bottom ball to greatest travel. Hopper feed optional. Teflon packings are recommended.

Graco® Xtreme XL Heavy Fluid Package

WIWA® Herkules 75:1 or Carboline approved equivalent

**Pump** 

Contact the equipment manufacturers for specific models. Contact Carboline Fireproofing Technical Service for details.

WIWA® 500 PFP, Binks 1M Mastic or equivalent

**Spray Gun** 

Must be non-wetted spring assembly.

**Gun Swivel** | 5,000 psi (34.4 MPa) 12.7 mm - 9.5 mm (1/2" - 3/8")

<sup>\*</sup>Test reports and additional information available upon written request.

PRODUCT DATA SHEET

#### APPLICATION EQUIPMENT GUIDELINES

Listed below are general equipment guidelines for the application of this product. Job site conditions may require modifications to these guidelines to achieve the desired results.

**Spray Tips** | 0.059" - 0.063" (Use Graco heavy duty RAC non diffuser tips and housing)

Fan Size | 152 mm - 254 mm (6" - 10") depending on area being sprayed

Material Hose | Use 15m (50 ft) of high pressure spray line with a minimum I.D. of 19mm (3/4")

Whip Hose | 6m (20 ft) of 12.7 mm (1/2") I.D. minimum

Compressor Be certain that the air supply is a minimum of 185 cfm @ 100 psi (690 kPa). Air volume and pressure required will depend on equipment used.

## **APPLICATION PROCEDURES**

General

Thermo-Lag 270 may be applied by spray, trowel or hand application. When spray applying, Thermo-Lag 270 must be thinned 5% by volume (1 quart or 945ml water per 5 gallons maximum). A single coat built up with a number of quick passes allows greater control over quantities, thickness and finish. In most conditions, it is advantageous to apply two thin coats rather than one thick coat.

Application Rates

At an ambient temperature of 21°C, apply 3mm per coat (wet)

**Wet Film Thickness** 

Frequent thickness measurements with a wet film gauge are recommended during the application process to ensure uniform thickness.

**Palming** 

Hand application of Thermo-Lag 270 may be more economical when cables are "ganged" or for protecting individual strands. Rubber gloves are recommended

Trowel

A standard plasterer's hawk and trowel may be used for suitable applications. Selection of instruments is left to the discretion of the applicator.

### **APPLICATION CONDITIONS**

Condition	Material	Surface	Ambient	Humidity
Minimum	10°C (50°F)	4°C (39°F)	4°C (39°F)	0%
Maximum	43°C (109°F)	35°C (95°F)	35°C (95°F)	90%

<sup>\*</sup>Air and substrate temperature must be at least 4.4°C and rising. Surface temperature should be a minimum of 3°C above the dew point. The maximum humidity is 90%. Area must be protected from rain or running water during application until material is cured. Minimum ambient temperatures must be maintained for 24 hours after application.

#### CURING SCHEDULE

Surface Temp.	Dry to Touch	Final Cure Time
21°C (70°F)	24 Hours	15 Days

<sup>\*</sup>Curing times are dependent on thickness, humidity and temperature. Normal dry times are based on a wet thickness of 3.2 mm (1/8").

PRODUCT DATA SHEET

#### CLEANUP & SAFETY

## Cleanup

Pump, gun, tips and hoses should be cleaned with clean, potable water at least once every 4 hours at 21°C and more often at higher temperatures.

## Safety

Follow all safety precautions on the Thermo-Lag 270 Safety Data Sheet. It is recommended that personal protective equipment be worn including spray suits, gloves, eye protection and respirators when applying Thermo-Lag 270.

## Overspray

All adjacent and finished surfaces shall be protected from damage and overspray. Wet overspray may be cleaned with soapy or clean potable water. Cured overspray may require chipping or scraping to remove.

#### Ventilation

In enclosed areas, ventilation shall not be less than 4 complete air exchanges per hour until the material is dry.

## Caution

Thermo-Lag 270, like most water based coatings, is electrically conductive until it is dry. Extreme caution should be exercised when the material is applied to energised cables and equipment. The material should never be applied without the supervision of plant safety personnel.

### TESTING / CERTIFICATION / LISTING

Thermo-Lag 270 has been successfully tested at Intertek laboratories to the following international test standards:

#### Intertek

IEC 60331-1 - Circuit Integrity

IEC 60332-3-22 - Flame Propagation

IEC 60754-1 - Halogen Gas Content

DEFSTAN 02-711-2 - Smoke Index

Thermo-Lag 270 has been tested and approved by Factory Mutual Research Corporation at 1.6 mm (1/16") dry thickness, and evaluated by Sandia Laboratories in tests sponsored by the U.S. Nuclear Regulatory Commission using both propane and diesel fueled fires. Copies of both the Factory Mutual and Sandia Laboratories' test reports are available upon request. Ampacity tests run by Factory Mutual show "No electrical derating necessary when a cable is coated (and cured properly) with Thermo-Lag 270." The temperature attained was well below the maximum temperature rating of the cable insulation. Heat transfer calculations should be used to

#### **FM Global**

calculate derating requirements of large groups of conductors.

• Report EPS 96202

Fire Retardant coating for Electrical Power and Control Cables at 1.6mm (1/16") dry film thickness.

### PACKAGING, HANDLING & STORAGE

Packaging | 5 gallon

12 Months

#### **Shelf Life**

\*Shelf Life: (actual stated shelf life) when kept at recommended storage conditions and in original unopened containers.

Flash Point (Setaflash) | >148°C

PRODUCT DATA SHEET

# PACKAGING, HANDLING & STORAGE

Shipping Weight | 11 lbs. per gallon (Approximate)

Storage | Store indoors in a dry environment between 4.4°C - 37.7°C. Keep from freezing.
